

Caldera wins SGIA product of the year award for Software

Caldera has just received the DPI Best Product of the Year Award for its RIP product line and new FLOW+ Business Automation and Control workflow solution for the Wide Format Printing Market, at the SGIA 08 (The Specialty Printing and Imaging Expo, Oct. 15-18) in Atlanta.

This award identifies the pre-eminent products in the digital graphics field, those that clearly provide new definition of the industry technology and recognizes outstanding products that have impacted 2008 and will impact 2009.

From quote to invoice, while managing the production process (printing and finishing), inventory analysis and planning, automation of the RIP, outsourcing, delivery notes, financial statistics and accounting synchronization, FLOW+ is a complete Wide Format Business Workflow solution

The product, an intelligent combination of an MIS (Management Information System), an ERP (Enterprise Resource Planning) and a CRM (Customer Relation Management), is the first Workflow software which will interact directly with the RIP spooler.

“This reward, which is the recognition of our strong RIP culture, color-science know-how and technological experience achieved through the feedback of our customers and partners over recent years, is something that we would like to thank them for and share with them. We are convinced that this award and new product release will impact the year 2009”

Joseph Mergui, Caldera CEO

Caldera Graphics is a software company specialized in color management, imaging and driving of large format peripherals. The Caldera software packages are “production oriented”. With the experience of 17 years in imaging technology development, Caldera Graphics counts thousands customers worldwide.
